

Wireless HDMI with Microsoft Display Adapter

Windows 7, Windows 8.1 and Android devices can be used in our courtrooms to project wirelessly to a Microsoft Display adapter connected to our media carts or in Courtroom 202. However, the device must be Miracast compatible. As stated by Microsoft, the device must meet the following requirements to be capable:

- Windows 7 and 8.1 w/ Miracast Support
 - Many Windows PCs purchased after 2010 will support Miracast. However, most PCs manufactured prior to 2014 will require updating of device drivers on the PC for Miracast to function properly. You must have administrator rights on the PC to update drivers on Windows PCs. To do so follow these steps:
 - Update your PCs drivers from your manufacturer's website. This would be Dell, HP, Lenovo... Specifically you will need to update the BIOS, wireless driver and graphics driver.
 - Update the Intel video driver (from Intel's [download site](#)) to the most recent version.
- Android w/ Miracast Support
 - Miracast enabled Android devices 4.2.2 and later. Due to numerous differing Android devices, there is no guarantee that your device will work with the Microsoft Display Adapter. It will likely need to be tested in the courthouse.
